ABSTRACT

The flow of postsecondary level students into and out of a state or regional area can be significant to many institutions in their budgeting and planning. In New England the migration of students will continue to be a critical factor in the decades ahead. The data in this report encompass all full-time and part-time students or total headcount enrolled at all levels in degree-granting institutions in the New England states. The findings indicate that those institutions continue to attract significant numbers of students across state lines, but that there have been a number of changes in the patterns of migration since 1968. Although students are attracted in larger numbers to the region's higher educational institutions from outside New England, these students constitute a smaller percentage of the region's total enrollment. Statistical tables are presented for: New England summary by state of residence, 1975 and 1968; intra-New England migration, 1975 and 1968; and state tables for Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont. FOREWORD

The flow of postsecondary level students into and out of a state or regional area is a fact which is always interesting and in a region such as the Northeast can be a matter of critical importance to many postsecondary institutions. Each college or university knows, of course, what part this student migration plays in its operations from year to year and thus over an extended period. Only occasionally, however, are widespread surveys made which show trends or migration patterns touching a substantial number of institutions. As is noted in this report, the most recent such survey was done in 1968. The years between then and now have been almost cataclysmic in postsecondary education as in the nation's general political economy. In New England the migration of students from and into the area is a critical factor for many institutions. It will be of increasing importance in the decades immediately ahead.

With this report NEBHE continues its effort to provide the institutions and agencies of this region with useful data for awareness and planning. Prepared by Robert L. Melican, Director of Research and Planning for the Board, with assistance from staff colleagues Randy Hartnett and Jo Ann Lombardo, the report gives both statewide planners and executives and institutional officers a wealth of data for immediate information and forward planning. As far as we can determine no other report will contain the specificity seen in this one. It is the Board's plan to issue such documents regularly and to be capable of preparing special reports for agencies and institutions desiring them. This function is responsive to the Board's mandate under the New England Higher Education Compact.

ACKNOWLEDGEMENTS

This report represents another step in advancing the higher educational policy, research and information capacity available to the states and institutions of higher education in the New England region. In October of 1975 the New England Board of Higher Education, at its annual meeting, approved the development of an integrated machine readable data base on higher education to provide a cost effective mechanism to better comprehend and monitor the condition of higher education in the region. As a result of this effort information on enrollments, degrees conferred, tuition, fees, room and board figures, program inventories and migration reported here, previously unavailable to many of the states in a comprehensive form, is now available.

The cooperation of a number of institutions, agencies and individuals was necessary in bringing this effort to fruition. Among them are: the coordinating boards and "1202 Commissions" of the region, those institutions which worked with this Board in the elimination of inconsistencies and final editing of results, the National Center for Educational Statistics and their sub-contractor, Value Engineering, who were extremely helpful in providing data which was unavailable to the Board. We also wish to recognize our indebtedness to the New Jersey Department of Higher Education, The University of the State of New York and the Department of Education of the Commonwealth of Pennsylvania for their generous assistance in providing residence and migration data on New England students studying in their respective states.

The data presented in this report for academic year 1975-76 was taken from the Department of Health, Education and Welfare, Education Division's Higher Education General Information Survey "Residence and Migration of College Students Fall 1975" (O.E. Form 2300-2.8, 3/75). It encompasses all full-time and part-time students or total headcount enrolled at all levels in institutions chartered to grant degrees in their respective states. The survey forms were sent to the New England Board of Higher Education by state agencies and individual institutions for edit, follow up and conversion to machine readable form and processing. There are some discrepancies between data reported in the "Opening Fall Enrollment" survey and those on the "Residence and Migration" form. These have been explained by institutions as corrections on fall enrollment, drop-outs or failure to report evening division program enrollments which are assumed to be in-state residents.

Information for academic year 1968-69 was taken from Residence and Migration of College Students Fall 1968. Washington, D.C.: U.S. Government Printing Office, 1970.

INTRODUCTION

Concern for a better understanding of the residence and migration of students attending institutions of higher education has taken on increased importance for educational policy and planning personnel in recent years. There have been no surveys conducted on a national or regional basis since 1968. The result has been that many states and institutions depend on information reflecting conditions seven years ago to anticipate the number of students that could reasonably be expected to cross state lines and enroll in the region's colleges and universities.

Current information and continued trend monitoring on the migration of students becomes more critical for both planning and decision making as:

1. higher education in general faces the immediate prospect of a diminished number of traditional students in the 18 to 21 year old age group,

2. the population of the New England region and the Northeast are affected by economic growth and out-migration, and

3. questions on the viability of growth in adult and non-traditional education sectors continue to surface.

There are unique conditions in the complex of higher educational institutions in New England that make the region sensitive to the issue of student migration. The average size of an institution of higher education in New England is only 2,700 students. There are 169 institutions, or 65% of the region's colleges and universities, with a total enrollment of less than 2,000 students. With over 124,000 students coming to New England for their education, or the equivalent of 46 average size institutions in the region, the importance of being constantly alert to changing migration patterns comes into sharper focus.

There are, of course, exchanges that take place within the framework of migration. Many New Englanders go outside the region for their education. Therefore, the net migration or balance of trade between New England and other parts of the country provides a clearer picture of the real effect of migration. If New England residents leaving the region for their higher education exceed in number those entering, then New England would be a net exporter or maintain a negative balance of trade with the rest of the country. Complete national data is not available at this time. However, with the cooperation of New

Jersey, New York and Pennsylvania, three major states which attract New England students, net migration figures are available. They indicate that New England is, in fact, a net importer of over 37,000 students from the three states. In institutional terms these three states account for 14.2 average sized institutions in the region. Their economic importance is equally significant. Assuming an average college student conservatively spends for tuition, room, board and other expenses $4500 each year in the local economy, New England gains approximately $166,000,000 in the exchange. Adding a potential positive balance of trade with the rest of the nation and foreign countries could add considerably to this relatively conservative figure. This presents a sound case, if for no other reason than economic self interest, to both continually monitor and nurture this significant export industry in the region, New England higher education.

The information provided in this report is extensive. While summary data for fall enrollments for 1968 and 1975 have been included in the report, the permutations in data presentation are innumerable. It is expected that state agencies, consortia, or institutions will be able to tailor the data to their expressed needs. Unique breakdowns for the purposes of comparison by type of institution are available, to those who desire further refinement for administrative purposes, from the New England Board of Higher Education.

SUMMARY OF FINDINGS

New England institutions of higher education continue to attract significant numbers of students across state lines in pursuit of higher learning. This is true both within and from without the six-state region. There have, however, been a number of changes in the patterns of migration since 1968.

Although students are attracted in larger numbers to the region's higher educational institutions from outside New England, these students constitute a smaller percentage of the region's total enrollment. In 1968, 97,775 students came to the region from other parts of the United States and foreign countries, representing 22.6% of the region's enrollment (cf. page 24). Over 10,000 enrolled in public institutions and over 86,000 in private institutions (cf. pages 25 and 26). In academic year 1975-76 over 124,000 non-New England residents attended colleges and universities in the region. These 124,000 students, however, constitute 18.1% of the total enrollment or a decline of 4.5% in the relative percentage of total enrollment from 1968 levels (cf. pages 21 thru 26).

Only two states of the ten leading exporters of students to New England have increased their percentage of total enrollment between 1968 and 1975 (cf. pages 9 thru 20 for more complete comparisons).

COMPARISON OF ENROLLMENTS
FROM
MAJOR NON-NEW ENGLAND STATES
1968 - 1975

	Total Out-of-Region Enrollment		Percentage Total Enrollment	
	1968	1975	1968	1975
New York	35,924	41,279	8.3%	6.0%
New Jersey	16,023	19,141	3.7	2.8
Foreign Countries	8,730	12,617	2.0	1.8
Pennsylvania	7,029	9,783	1.6	1.4
Ohio	3,251	4,046	0.8	0.6
Illinois	2,939	3,634	0.7	0.5
*California	2,767	4,657	0.6	0.7
Maryland	2,709	3,759	0.6	0.5
Virginia	1,921	2,439	0.4	0.4
*Florida	1,425	2,464	0.3	0.4

*Indicates percentage increase over 1968.

As noted in the introduction, the number of New Jersey, New York and Pennsylvania residents enrolled in New England in 1975 exceeds that of New England residents enrolled in those three states by over 37,000. The net balance of trade between New England and New Jersey is 16,683, an increase of 5,125 students over 1968, with New York it is 17,772, a reduction of 670 from 1968 levels and with Pennsylvania it is 3,203 or an increase of

2,829 students. In spite of this net increase in numbers of students who are in-migrants to New England, however, the percentage of total enrollment from these three states dropped from 13.6% in 1968 to 10.2% in 1975.

The balance of trade picture is quite different when analyzed from the perspective of the individual states.

In the exchange between residents of New York and the individual states of the New England region, Connecticut is the only state with a negative balance of trade. This net export figure has risen sharply since 1968. The Commonwealth of Massachusetts experiences the largest positive net balance, 12,471, which is down slightly from 1968 levels.

	1975	1,687	1,032	655	8,096	5,548	2,548	9,783	6,580	3,203

More than 3,200 Pennsylvania residents come to New England for their higher education. The largest number of students come to Massachusetts which maintains a net positive balance of trade of over 3,000 students. Connecticut again, as with New York, has a negative net migration. Although this figure is down considerably from 1968 levels, 1,211 more Connecticut residents go to Pennsylvania for their higher education than Pennsylvanians entering the state of Connecticut.

A summary of the total impact of the three-state exchange shows, as would be expected, that the largest exchange takes place among students attending private institutions of higher education. Connecticut is the only net exporter in its exchange with the three states. Massachusetts is the largest importer of students with a positive net balance of more than 23,000 students.

There are also important exchanges that take place within the New England region itself. In 1975, over 66,000 of the region's residents crossed state lines to attend a college or university in another New England state representing 34.7% of all out-of-state students (cf. page 21). The percentage of New England residents attending institutions of higher education in other New England states has declined overall in each of the states since 1968. In that year it ranged from a high of 26% in New Hampshire to a low of 4.8% in Connecticut. In 1975 New Hampshire dropped only one tenth of a percent to 25.9% while Maine declined 5.5% in its percentage of students from other New England states. Connecticut continues to maintain the lowest percentage of residents from other New England states, 4.4%. This distribution varies between the public and private sectors. Within the public sector in New Hampshire 21.7% of public higher education enrollment comes from other New England states. In Connecticut, only 2.9% of public college and university enrollment is from other New England states. Within the private sector, only Connecticut has increased its percentage of New Englanders, a mere one tenth of one percent over 1968 levels, to 6.9%, the lowest percentage in the region. Maine maintains the highest percentage of New England residents within its private colleges and universities. Maine and Rhode Island are the only states in the region where New England residents constitute a higher percentage of private enrollment than those coming from outside the region.

	Non-N.E.	35.0	28.3	20.1	16.2	48.6	45.9

In the net migration among the New England states there have been notable changes since 1968. Connecticut continues to maintain a deficit in its exchange with the other New England states. The deficit has, however, increased substantially from a 1968 level of 11,734 to 15,122 in 1975. Maine has increased the positive net balance of trade with Massachusetts to 2,126 in 1975. Massachusetts on the other hand has increased its negative

balance from three to four of the five New England states while increasing slightly its positive balance with Connecticut. The overall effect has been a marked reduction from a 6,441 positive balance in 1968 to 2,538 in 1975. The most significant increase in net balance over the past seven years has been in the state of Rhode Island. A dramatic turnaround in its balance with Massachusetts coupled with a large increase in its exchange with Connecticut have led to a rise from a 557 positive net balance in 1968 to 4,135 in 1975.

The information available to date suggests that, with the exception of Connecticut, the New England states are net importers of students in the total balance of exchange that exists in the Northeast. Until final national data on New England residents studying in the rest of the country is available the full extent of the exchange and the net impact on the region's colleges and universities as well as its economy will be unknown.

SUMMARY OF NET MIGRATION
FALL 1975
